# CERTIFICATIONS

## USA standards (UL mark)

Underwriters Laboratories Inc. is an independent organization that for more than 100 years has been controlling and certifying product safety. Today, the organization is still the major body for compliance assessment, both for the United States market and the rest of the world. Every year over 14 billion products are granted the UL mark, which works with five test laboratories in the United States and an international network of branches and representatives.

The procedures required to obtain the right to apply the UL mark to products is complex and highly selective.

Electric motors, considered as components of equipments or manufacturing systems, are recognized with the UR Recognized Component mark, applied to the product identification plate. Production samples, once safety tests made on them have given positive results, are given a UL file number that identifies the manufacturer and the product or products approved.

The file containing CEG products with UL approval is E176350. The certifying agency also makes periodic checks without prior warning on production facilities, to guarantee constant compliance with the requirements.

NB: UL product certification is demonstrated, in addition to the mark applied on the product itself, solely by the Yellow Card issued to the manufacturer, copies of which are available on request.

## Canadian standards (CSA mark)

The Canadian Standard Association is also an independent organization that since 1919 has been committed in particular to the development of standards and their application to production, with specific reference to the protection of persons and of domestic and manufacturing systems in general. The CSA also has a comprehensive network of branches and representatives, and is able to test and certify products in accordance with its own standards, with those of the USA and with other international standard agencies.

The approval procedures for the application of the CSA mark involve rigorous duration trials, often under extreme conditions.

Electric motors are recognized with the CSA Recognized Component mark, applied to the product identification plate. Production samples, once safety tests made on them have given positive results, are given a CSA file number that identifies the manufacturer and the product or products approved.

The file containing CEG products with CSA approval is LR109925-1. The certifying agency also makes periodic checks without prior warning on production facilities, to guarantee constant compliance with the requirements.

NB: CSA product certification is demonstrated, in addition to the mark applied on the product itself, solely by the Certificate of Compliance issued to the manufacturer, copies of which are available on request.

## High efficiency Energy Policy Act (EP Act): Public Law 102-486

This law, published in 1992 in the USA, gives guideline to be followed for the improvement of electric motor efficiency, with the same aims as the program being implemented by the European Union (energy saving, less pollution, etc.). Since 1992 the American Department of Energy (DOE) has developed the reference standards to be applied (classification, checking procedures, product marking), and these came into effect in October 1997. The DOE has also accredited the following agencies and their relative reference standards:

- NEMA (National Electrical Manufacturers Association) – Standard IEEE 112 - 1991
- CSA (Canadian Standard Association) - Standard C390 - 33

Meeting already CSA Safety standard requirements, CEG has decided to enlarge its products range, working on the improvement of electrical efficiency too. Particular attention was focused on the three phase single speed motors, with power from 1 to 200HP, 2 - 4 - 6 poles, whose mandatory efficiency levels have been achieved.

## European Standards (CE mark)

The CE mark, standing for Conformité Européenne, indicates that the product complies with all applicable EU Directives. This is affixed by the manufacturer at the end of the manufacturing process having complied with all applicable standards. Three different directives apply to electric motor design and production. 89/392/EEC – Machine Directive, 89/336/EEC – EMC Directive, 73/23/EEC – Low Voltage Directive. The CE mark applied to the motor certifies CEG's declaration of compliance with the above directives.

# GENERAL CONSTRUCTION

## Frames

All CEG frames are constructed in pressure die-cast aluminium alloy from 56 to 180L frames; from 200L to 315 in cast iron.

## Feet

Frame sizes from 63 frame to 180 frame have removable multimount feet. The motor features pre tapped holes to relocate the feet and change the terminal box position.

## Endshields

CEG motors up to 180L frame have endshields pressure-cast aluminium, from 200 to 315 made in cast iron. All aluminium endshields from 100L frame and up have reinforced bearing journals (with steel inserts) giving them greater mechanical strength.

## Fan Covers

Made from pressed sheet metal and fitted to ensure proper airflow and cooling.

## Cooling Fans

Motors are fitted with a bi-directional fan, manufactured with high thermal resistance PVC plastic in 56 to 160L frames and in aluminium from 180M to 315 frames. Alternative fans for applications with extremely high ambient temperatures are available.

## Shafts and Rotors

Shafts are made with C45 steel, alloy steel can be used on request. The cage type rotors are made in die-cast aluminium (AL) or aluminium alloy (GD ALSI 13-UN14514) and are dynamically balanced.

## Terminal Boxes

The standard position for the terminal box is on the top of the motor (F0 position). On 63 to 180 frames, the box position can easily be converted by relocating the feet into the pre tapped holes making a F1 or F2 position. They are aluminium on three phase and plastic on single phase.

## Paint

CEG motors are finished with ecological water-soluble paints free of chrome and lead; the standard color is BLUE RAL 5010; other colors are available upon request.

# ENCLOSURE and BEARINGS

## Bearings

CEG motors are fitted with rigid radial bearings with one ring of "CM" or "C3" ball bearings with IP44 protection (ZZ), or radial bearings with a ring of "C3" cylindrical roller bearings, depending on dimensions and/or requests (see chart below). These bearings are supplied by leading manufacturers, and are specifically designed for use on electric motors. The bearings are pre-lubricated for lifetime operation by the manufacturers with lithium grease (resistant from -40 to +130°C), and are axially pre-loaded with compensation rings in tempered steel. From M225 to M315 they are lubricated with a grease nipple located at the top of the motor at each end (D and N). These motor sizes should be lubricated at intervals that depend on speed (RPM) and running hours.

**Chart: Bearings fitted on CEG motors**

## External or mechanical protection rating

The level of protection against accidental contacts and the entry of solid bodies and water is expressed by an international system of symbols composed of two letters and two numbers:

IP = reference letters for type of protection

1<sup>st</sup> number = level of protection against solid bodies

2<sup>nd</sup> number = level of protection against water

**Chart: Protection ratings of electrical machines (IEC 34 - 5)**

1 <sup>st</sup> number	Protection against solid	2 <sup>nd</sup> number	Protection against water
0	Machine not protected	0	Machine not protected
1	Protected against solid bodies with dimensions over 50 mm	1	Protection against vertical fall of water drops
2	Protected against solid bodies with dimensions over 12 mm	2	Protection against water drops with maximum angle of 15°
3	Protected against solid bodies with dimensions over 2.5 mm	3	Protection against rain
4	Protected against solid bodies with dimensions over 1 mm	4	Protection against water sprays
5	Protection against dust	5	Protection against water jets
		6	Protection against water waves
		7	Protection against effects of immersion
		8	Protection against effects of submersion

Standard CEG motor protection is IP 55: By request protection rating IP 56 can be supplied (with surcharge).

# Brake motors

CEG can supply motors with three different types of brake, to be chosen according to the application:

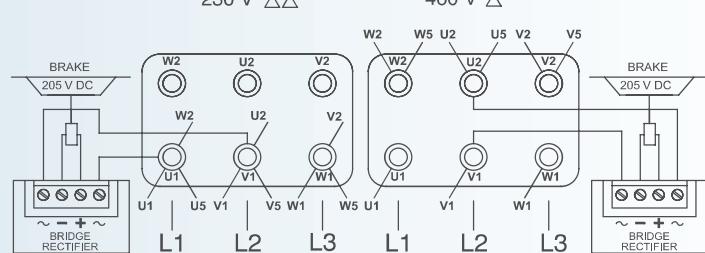

**1. FPC type:** gradual electromagnetic brake powered by direct current, with a single braking surface (special order factory delivery)

**2. FHC type:** electromagnetic brake with high torque powered by direct current, with a double braking surface (stock in North America)

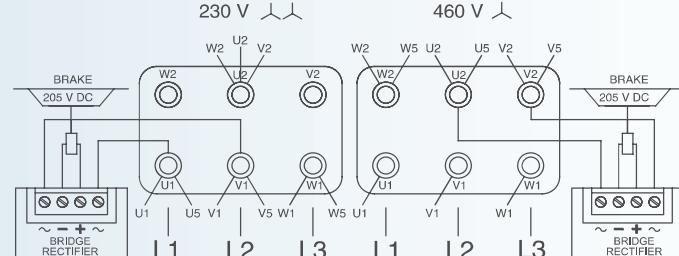

**3. FHA type:** electromagnetic brake with high torque powered by alternating current, with a double braking surface special order factory delivery

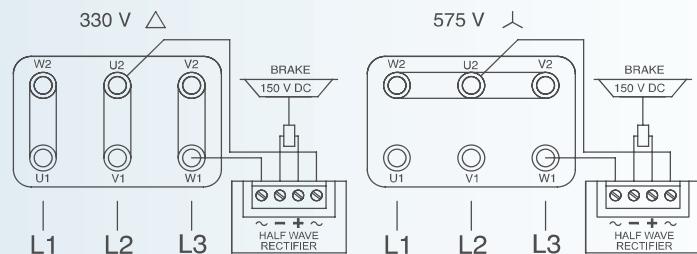

Three phase Brake motor with 6 studs and 9 wires     $\Delta\Delta/\Delta$

# High-torque DC brake MTFHC - DPFHC

## PRODUCTION STANDARDS

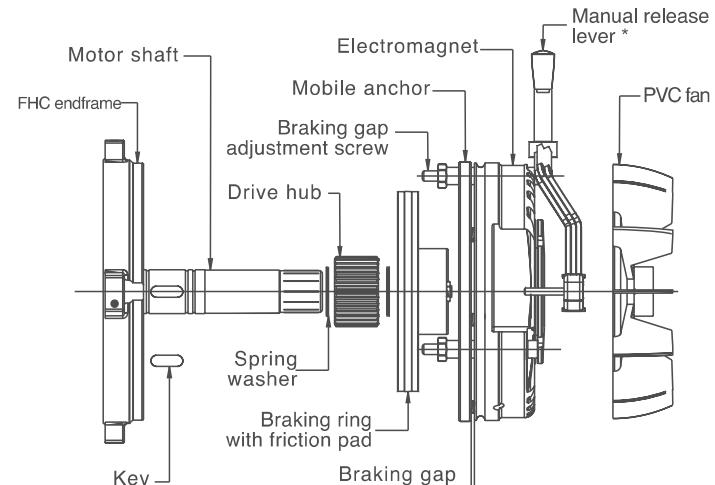

Mounting – construction form	Removable feet
Terminal box position	Multimount
Power supply	<b>MT</b> 230/460V or 575V 60 Hz
	230/460V suitable for 380V 50Hz with separate supply to rectifier
	<b>DP</b> 460V or 575V or 230 V 60 Hz
Brake coil DC with rectifier	205V DC (230/460V) 150V DC (330/575V)
Protection rating	IP54
Bearings	2 RS
Winding insulation	Class F
Connection cover	terminal box with lid (2 aluminium components FH type)
Motor clamping	bosses and bolts
Paint finish	BLUE RAL 5010
Fan cover	galvanized sheet steel
Service factor	1.15 (*unless otherwise stated)

This version has a double dry braking surface. Braking torque is provided by the thrust of an adjustable spring, with electromagnetic release controlled by magnets powered with direct current. The main characteristics of this model are as follows:

- silent operation;
- braking without axial shifting;
- negligible additional moment of inertia;
- possibility of fitting a hand release lever, on request (\*).

This brake requires no maintenance apart from the periodic adjustment of braking gap made necessary by wear on the friction pad. This adjustment is made by turning the cylindrical screws located on the rear of the unit until the braking gap returns to the values indicated (see chart).

**N.B.** Other design features must be specified (brake voltage, connection through terminal board or separate).

Size	Brake size	Braking torque (NM)	Braking torque (ft. lbs)	Power (W)	Closing time (ms)	Release time (ms)	Braking gap (mm)

Protection rating	IP54		
Bearings	2 RS		
Winding insulation	Class F		
Connection cover	terminal box with lid (2 aluminium components)		
Motor clamping	bosses and bolts		
Paint finish	BLUE RAL 5010		
Fan cover	galvanized sheet steel		
Service factor	S1		

The main characteristic of this type of brake is its soft and gradual braking, which makes it particularly suitable for application on machines with very high inertial masses, where abrupt stops could subject the structure to dangerous stresses. The FPC brake has a lower braking torque and longer stopping times than the other brake types (proportional to the mass inertia of the load). This is achieved with a single braking surface and the higher mass inertia given by the cast iron fan, which is an integral part of the brake. The brake is powered by direct current.

The braking gap is regulated with the adjustment screws located at the non-drive end of the motor shaft, with no need for the fan cover to be removed (see exploded diagram over and diagram inside every motor of this type).

**N.B.** Other design features must be specified (brake voltage, connection through terminal board or separate).

The standard voltage rectifier or power supply unit may be modified for special requirements (rapid opening and/or closing, anti-interference filter).

These motors are specifically designed for applications requiring high power with smaller frames and lower shaft heights. They are suitable for applications such as: circular saws, pendulum saws, polishing machines, grinding machines and others.

# Option for Inverter-duty Three-phase motors

Particular care is dedicated to these versions, based on standard motors, during the construction phase:

- phase separators
- double impregnation
- low losses laminations
- low balancing level

**Fixed Speed ventilation (servoventilation):** from sizes M71 to M132

servoventilation kits are used, with a single-phase voltage, housed in the fan cover. From sizes M160 to M315 a three-phase motor is installed inside the fan cover, with suitable characteristics for the application.

**Electronic speed control equipment:** encoder, resolver, tacho - generator - factory delivery

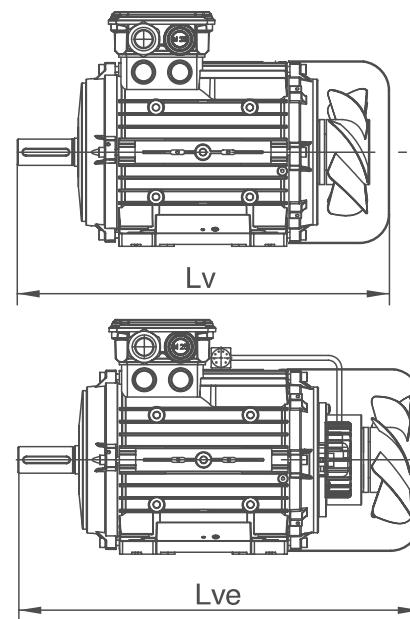

## Servoventilation kit

NOTE

# Terms and conditions of sale

## **PRICE:**

Prices shown are F.O.B. Mississauga, Ontario, Canada or Atlanta, Georgia, U.S.A.. All taxes are extra where applicable. Prices to be confirmed at time of ordering.

## **PAYMENT TERMS:**

Net 30 days from the date of shipment for credit approved accounts. 2% per month finance charge will be added to any overdue account not paid after 30 days as allowed by law. Product will remain property of CEG ELECTRIC MOTORS N.A. until complete payment has been made by the buyer.

## **CLAIM:**

Shortage or damaged goods in transit must be made to the transportation company as risk passes to the customer at F.O.B. point.

## **WARRANTY:**

CEG ELECTRIC MOTORS N.A. have a two years warranty from date of installation, against defects in manufacture or defective material. Seller at its option will either replace or repair the defective units. Warranty does not apply to improper storage; improper installation or use; modifications or repairs without our agreement; and anyone other fault beyond our control. Warranty is void if motor has been dismantled by anyone other than authorized repair facility.

## **SELLER LIMITATION OF WARRANTY AND LIABILITIES:**

Seller makes no warranties respecting the suitability of or fitness of these motors for any particular purpose or use. Buyer shall not in any event be entitled to, and seller shall not be liable for loss of profit indirect, incidental or consequential damages of any nature. Buyer recovery from seller for any claim shall not exceed buyer purchase price for the product, irrespective of the claim whether in contract warranty or otherwise. No liability will be accepted for field service, removal, replacement, inspection, freight or travel charges unless previously authorized in writing by CEG ELECTRIC MOTORS N.A.

## **RESTOCKING:**

Charges 25% within 30 days of receiving, in original box and condition.

## **CANCELLATION:**

Special Custom Orders may not be cancelled after 15 days. Cancellation requested in writing prior to 15 days will incur 35% charges.
